A high-performance ANTISLIP adhesive film

Recommended for:
all types of boat

The first maritime antislip adhesive film

Slipping or falling on a boat can have serious consequences. Decks are often slippery, particularly when the boat is heeled over. There are, of course, numerous paints on the market with combinations that are complicated to explain. If applied, they need time to dry, etc. Finally, they change and damage the original surface of your boat. Uniflow engineers worked on finding a simple, quick, economical and effective

solution: Replace paint by an antislip adhesive film that protects, is invisible and is easy to apply.

FLOW Grip is a high-performance, multiple-layer, transparent film with an upper surface covered with a multitude of microscopic glass beads.

The film **FLOW Grip** is available in two versions : **FLOW Grip strong** and **FLOW Grip regular**.

FLOW Grip strong

- Ground glass beads
- Adhesive layer
- PVC
- Special marine adhesive
- Peel-off protective paper backing

FLOW Grip regular

- Glass beads of a set size
- Adhesive layer
- PVC
- Special marine adhesive
- Peel-off protective paper backing

FLOW

Grip

Grip regular on the stairs

Self-adhesive and specifically designed for use in marine environments (sweet or salt water) ensuring safe footing on all the smooth parts of the boat where there is frequent passage.

Grip is easy to apply and remove without damaging the areas protected. The adhesive layer remains on the film and not on the surface to which it is applied.

Advantages

High performance

Excellent antislip properties in accordance with standards 01 DIN 51130 and 01 DIN 51017.

Highly resistant to abrasion, protects the deck from wear. Protects against UV and limits yellowing of the gel coat. Deadens sound levels.

Economical

A single application for years of sailing.

Practical and easy to place

Can be applied to all surfaces (wood, plastics, steel, plexiglass, glass, etc.). Can be applied inside and out. Easy to cut up (cutters or scissors).

FLOW **Grip**

Grip is digitally printed!

Grip is easy to digitally print (latex inks). Using a computer file, you can print your antislip strip with the name of your boat, or with the logo or any decoration you choose. The printing does not change the antislip properties of the films **Grip**.

Printing on the film **Grip strong**

1,3 m x 0,85 m

Film glued to the pontoon and on board, where the gangway is placed.

Grip is a transparent film which preserves the white or colours of the base colour.

Grip is printed directly (digital printing) or protects any printing with an upper lamination layer.

Micro beads treated with antibacterial agents.

Entirely comfortable for bare feet (regular version).

Easy to clean thanks to the ordered structure of the glass beads.
